In the lefthand figure it is again for the instant closing both pas sages. The slide-valve is in constant motion up and down, being driven by a kind of crank (called an eccentric) which revolves with the fly-wheel. Very often the feet of the slide-valve are lengthened, as in fig. 86, so as LIGHT. Chapter XIV. RECTILINEAR PROPAGATION. PLANE MIRRORS. 162. Light is known to us through our sense of sight. The things which we see send light to our eyes, and it is by means of the light so sent that we see them. Some bodies allow light to come through them, and are called transparent; others prevent it from passing, and are called opaque. An opaque body hides from us any object which lies upon the production of a straight line drawn from our eye to...
