Geological Survey Professional Paper Volume 871

By Geological Survey

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. Excerpt: .formed an important but varying part of the CO₂ reservoir, in addition to the normal atmospherederived ocean water bicarbonate. Keith and Parker (1965) found that the $\delta^{13}C$ of mollusk shells growing in marginal marine environments was dependent upon the accessibility of continental (land plant-derived) carbon, and that the $\delta^{13}C$ values of the samples approached the marine values as the sampling sites progressed from estuarine to marginal bays. The samples from marginal bays also show a variable $\delta^{13}C$, which Keith and Parker (1965, p. 127) attribute to variable effects due to locally-produced CO₂ from decomposition of organic detritus, both continental and marine (Landegren, 1954) and from respiration of aquatic plants. Development of a local $\delta^{13}C$ deficiency by aquatic plants in waters with restricted circulation is consistent with observations by Wickman (1952). That the covering beds contained organic matter is shown by the rich fauna (trilobites and particularly brachiopods)....
