Although the tables occupy less space than some which are in existence, yet it is hoped that the present set may prove no less useful in practical work; for example, it proved possible in many instances to condense three or more separate formulae into a single reduction formula; and it is hardly necessary to point out that a given result can be found more quickly in a short than in a long table. A few other useful forms, such as (57), (58), have been added, which do not appear in the ordinary textbooks: and in selecting definite integrals, preference has been given to examples which occur in potential-theory and other branches of Applied Mathematics. Some numerical examples have been added to illustrate the general formulae, but it...
