Reviews

It is straightforward in go through easier to recognize. I actually have study and that i am sure that i will going to study yet again again down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.

(Jaclyn Johns DDS)

ANTINUCLEAR ANTIBODY, RHEUMATOID FACTOR, AND CYCLIC-CITRULLINATED PEPTIDE TESTS FOR EVALUATING MUSCULOSKELETAL COMPLAINTS IN CHILDREN: COMPARATIVE EFFECTIVENESS REVIEW NUMBER 50

CreateSpace Independent Publishing Platform. Paperback. Book Condition: New. This item is printed on demand. Paperback. 158 pages. Dimensions: 11.0in. x 8.5in. x 0.4in. Musculoskeletal (MSK) pain is common in children and adolescents, with an estimated prevalence ranging from 2 to 50 percent. MSK pain can affect physical, psychological, and social function and often prompts consultation with a physician. However, MSK pain is often nonspecific, which can make it difficult to arrive at an accurate diagnosis. MSK pain may be due to rheumatic or nonrheumatic causes. Nonrheumatic causes are more common, generally benign, and most often attributable to trauma, overuse, and normal bone growth. Rheumatic causes, such as inflammatory arthritis, are infrequent, generally chronic, and require accurate, timely diagnosis and effective intervention to prevent progression and long-term damage. Common rheumatic causes of childhood MSK pain include pediatric systemic lupus erythematosus (pSLE) and juvenile idiopathic arthritis (JIA). A complete history and physical examination is generally considered to be the best way to make a diagnosis of inflammatory arthritis. Physicians may request serological tests such as antinuclear antibody (ANA), rheumatoid factor (RF), and cyclic-citrullinated peptide (CCP) when children and adolescents are suspected of having inflammatory arthritis, despite the fact that the diagnostic performance, usefulness, and proper interpretation of these tests are uncertain in pediatric populations. This comparative effectiveness review summarizes the evidence on the test performance of ANA, RF, or CCP tests for pSLE and JIA in children with undiagnosed MSK pain. The report is intended for a broad audience including primary care physicians who may consider ordering these tests in a child with MSK pain, health payers who provide coverage for these tests, and parents or caregivers who want to know whether these tests can determine if their child does or does not have a particular disease. In order to better understand how...
