

Environmental Management: From Ancient to Modern Times

By C.V. Jayamani

New Century Publications, New Delhi, 2012. Hardcover. Book Condition: New. First. 14 cms. 276pp. Environmental pollution is one of the major problems faced by the world community, especially in the cities of the developing countries which have experienced unbridled growth of population, urbanization and industrialization. Municipal services such as water supply and sanitation, drainage of storm water, management of solid and hazardous wastes, supply of adequate and safe food and housing are unable to keep pace with urban growth. The unplanned location of industries in and around urban areas and volume of traffic have caused serious pollution problems. All these factors have led to deteriorating environmental conditions, adversely impacting the health of the people. Environmental degradation in India has been caused by a variety of social, economic, institutional and technological factors. Rapidly growing population, urbanisation, industrial activities and increasing use of pesticides and fossil fuels have all resulted in considerable deterioration in the quality and sustainability of the environment. An attempt has been made in this book to examine the causes and consequences of environmental pollution in India and suggest remedial measures to tide over the looming threat to the health and welfare of people.

Reviews

This is the finest book i have got study right up until now. I am quite late in start reading this one, but better then never. Once you begin to read the book, it is extremely difficult to leave it before concluding.
